

EATRIS-ERIC

European Research Infrastructure for Translational Medicine

H2020 Health NCP Network
Webinar - January 22 2019

Classical R&D fails too late in development

Ca. 65% fail at phase II

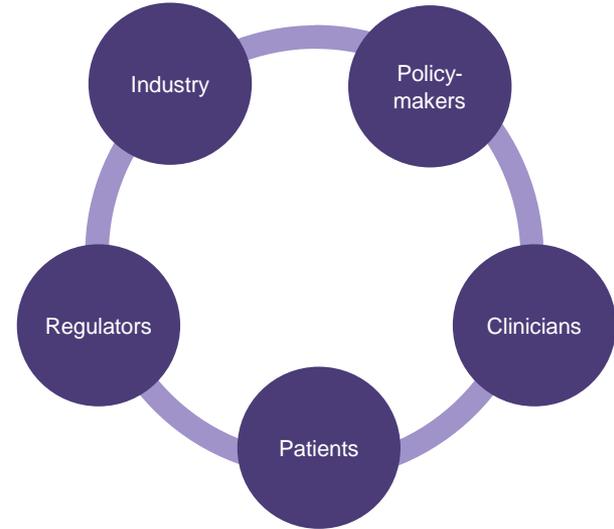

Adapted from Paul et al; Nat Rev Drug Disc (2010)

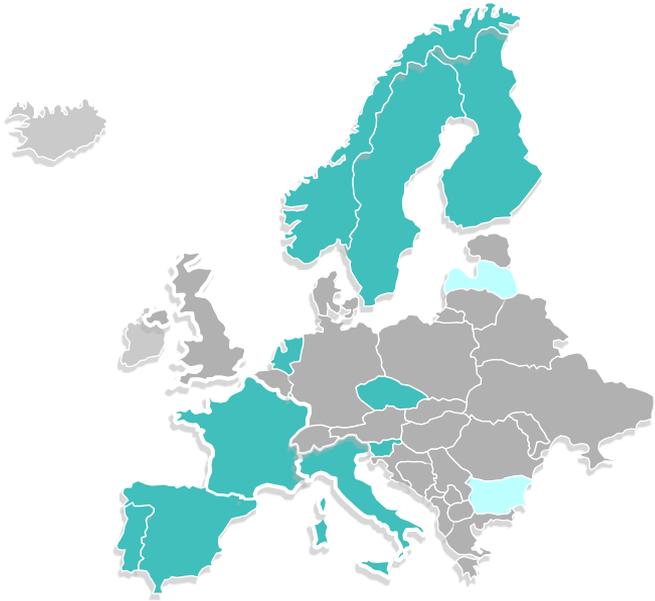

...that requires cross-sector collaboration

To improve research productivity

Academia needs to work across sectors
and collaborate with diverse stakeholders

Our Mission

We support researchers in developing their biomedical discoveries into **novel translational tools and interventions** for better health outcomes for society.

We collaborate with academia, industry, and funders to speed up health research.

Our Approach

- **Large pharma & biotech Industry**

We help forming public-private partnerships – pharma is a user of EATRIS infrastructure, expertise, facilities

Collaborations can be single-site, multi-site, multi-project

- **Research funders**

We support their investigators design, execute, monitor research projects with higher potential to reach the patient

- **National Competent Authorities**

We bring regulators closer to academia and facilitate early regulatory dialogue for complex projects

- **Academic investigators**

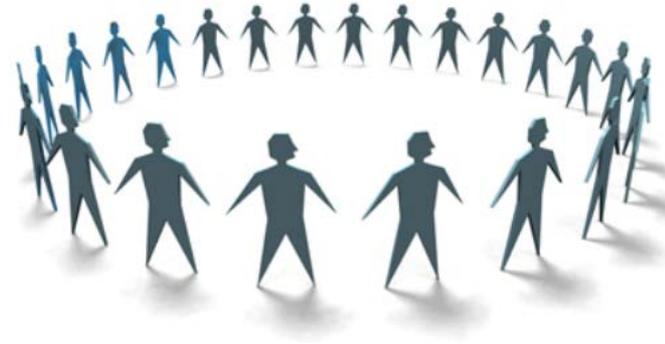

We provide access to training resources, and **support for funding applications (not only H2020)**

EATRIS support for funding applications

4 levels of involvement

Level 1: The Right Consortium

Support for consortium building

- We identify the right **European academic partner** using the EATRIS database (detailed capabilities of 90 member institutions across 13 countries)
- A list of institutions that matched the investigator's request is provided with contact details
- Free of charge service to any party; results available within a few business days

➤ **Criteria**

- The scope of the proposal idea must be translational
- The scope of the partner search must be specific enough to generate tangible results

Level 2: Letter of Support

Letter of support

➤ **Criteria**

- The scope of your proposal must be **translational**, and of **high scientific quality**
- **In line with EATRIS mission:** “To support researchers in developing their biomedical discoveries into novel translational tools and interventions for better health outcomes for society”
- **Multidisciplinary** consortium with strong laboratory and clinical expertise represented
- If relevant for the call, industry and/or patient organisations are included as partners
- Commitment to **FAIR principles** and data management plan foreseen

Level 3: EATRIS, consortium partner

EATRIS joins the proposal as partner

- Activities performed by EATRIS can include:
 - Regulatory strategy / HTA support / Translational potential assessment
 - Innovation management, industry partnering, sustainability planning
 - Training workshops (for ex, PP collaboration)
- **Criteria (in addition to previous level)**
 - Robust workplan given the resources available – high translational feasibility
 - At least one EATRIS member institution in the consortium

Level 4: EATRIS, co-leader of proposal development

➤ Criteria

- Proposal addresses systemic inefficiencies in medical research
- High foreseen impact in the field
- Proposal supports the development of tools for the research community
- Proposal is coordinated by an EATRIS member institution
- Consortium built on strong expertise of multiple other EATRIS member institutions

Thank you for your attention!
